

This listing of claims will replace all prior versions, and listings, of claims in the application.

*Listing of Claims*

1. *(previously presented)* A method for searching for a folder in a menu of a wireless device, comprising:
  - receiving, at a remote server, one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device;
  - identifying a folder based on the one or more search parameters, wherein the identified folder is part of a preexisting deck maintained by said remote server; and
  - communicating the identified folder to said wireless device for performing a menu navigation to the identified folder.
2. *(previously presented)* The method of claim 1, further comprising:
  - activating a script directed to one or more queries, the script associated with a navigation command, each of the one or more queries associated with the one or more search parameters.
3. *(canceled)*
4. *(previously presented)* The method of claim 2, wherein the script further includes one or more operations that performs one of facilitating a purchase based on the one or more queries, facilitating a reservation based on the query and placing a phone call based on the query.
5. *(previously presented)* A method for searching for a folder or an item in a menu of a wireless device, comprising:

receiving, at a remote server, one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device;

identifying a selection of a plurality of folders and/or a plurality of items based on the one or more search parameters, each of the plurality of folders and items being part of a preexisting deck maintained by said remote server; and

communicating a second menu to the wireless device based on the identified selection operation.

6. *(previously presented)* The method of claim 5, wherein the second menu is a flat menu that includes two or more identified items.
7. *(previously presented)* The method of claim 6, wherein the second menu includes at least one text message that contains at least one of the one or more search parameters.
8. *(previously presented)* The method of claim 6, further comprising activating a script directed to one or more queries, the script associated with a navigation command, each of the one or more queries associated with the one or more search parameters.
9. *(previously presented)* The method of claim 5, wherein the second menu is a hierarchical menu that includes two or more identified folders.
10. *(previously presented)* A device for searching for a folder or item in a menu of a wireless device, comprising:
  - an interface at a remote server that receives one or more search parameters from the wireless device, the one or more parameters different from a menu navigation command of the wireless device;
  - a search device that performs a search operation based on the one or more search parameters, the search operation identifying at least one folder and/or at least one item, the at least one folder and at least one item each being part of a preexisting deck maintained by said remote server and communicated to the wireless device; and

a managing device that provides information to the wireless device based on the search operation;

wherein one of the at least one identified folder and/or the at least one identified item or a portion of a second menu is provided for display on the wireless device, and wherein the second menu is formed based on the provided information.

11. *(previously presented)* The device of claim 10, the wireless device displays the at least one identified folder and/or the at least one identified item.
12. *(previously presented)* The device of claim 10, wherein the wireless device displays a portion of the second menu.
13. *(previously presented)* The device of claim 12, wherein the second menu is a flat menu that includes two or more identified items.
14. *(previously presented)* The device of claim 12, wherein the second menu is a hierarchical menu that includes two or more identified folders.
15. *(original)* The device of claim 12, wherein the second menu includes at least one text message that contains at least one of the one or more search parameters.
16. *(previously presented)* The device of claim 10, further comprising a script processor that provides at least one search parameter in response to a script directed to one or more query operations.
17. *(previously presented)* A device of claim 16, wherein the script processor accesses information relating to an external network in response to the script.
